SYNPLANT

Hi here I would like to tell you about what I would like in updates.
Some in my opinion functions.Thank you, for the wonderful work!

Alexander Ermolaev, fantomatica - (Russia)

1). **Chord** - The chord function is used, say branches (More than one but it turns on from under the menu or right-click);
2). Automation - of all parameters, by the way, it seems that in old versions genetic automation worked;
3). GUI - align the name "SYNPLANT" <- Or is this an idea?
4). Copy, paste a patch - more than one copy of the preset if one did not like using the second one
   When the second copy is copied, the name "copy-2" It is also possible to place presets) on a branch;
5). Genes - Control the parameters of the mouse wheel for exact values;
6). Volume - The elimination of sound loss saves the patch's renewal In the new version 1.2.2 this is not observed!;
7). Values - Set the values to parameters in a separate window;
8). Play Notes - Can be recorded by clicking on "Play notes";
9). Mute branch, skip not all at once;
10). MIDI - Reassignment of MIDI parameters and support more controller's. I use the Minilab Arturia Handles are obedient)

Thx!
